

Fieldglass to Workday Integration — Error Runbook v2.1

RPR Financial Solutions | Procurement & Contingent Workforce Team

WORKER NOT FOUND IN WORKDAY

Cause: The contingent worker exists in Fieldglass but has not been provisioned in Workday. This usually happens when the worker onboarding request was submitted in Fieldglass before the Workday account creation was completed by HR.

Resolution: Raise a ticket to the Workday HR team to manually provision the worker account. Provide the Fieldglass Worker ID and the expected Workday Employee ID.

Typical resolution time: 1–2 business days.

MANAGER NOT FOUND / INCORRECT MANAGER TAGGED

Cause: The manager assigned in Fieldglass does not exist or is inactive in Workday. Common reasons include manager recently changed roles, manager account deactivated in Workday, or wrong manager ID entered during Fieldglass requisition creation.

Resolution: Ask the requestor to verify the correct manager in Workday and update the Fieldglass requisition with the correct Workday Manager ID. If the manager account is deactivated, escalate to HR to reactivate.

Typical resolution time: Same day if requestor updates promptly.

START DATE / END DATE MISMATCH

Cause: The contract start or end date in Fieldglass does not align with what is configured in Workday. This can happen when dates are manually edited in one system after the initial sync, or when timezone differences cause a one-day shift.

Resolution: Verify the correct dates with the hiring manager. Update the dates in Fieldglass to match exactly. Re-trigger the integration by saving the Fieldglass record.

Typical resolution time: Same day.

FIRST NAME / LAST NAME MISMATCH

Cause: The worker name in Fieldglass does not exactly match the legal name in Workday. Common causes include nicknames used in Fieldglass, hyphenated names entered differently, or spelling errors during data entry.

Resolution: Update the name in Fieldglass to exactly match the legal name as it appears in the worker's Workday profile. Name changes in Workday require HR approval — do not change Workday directly.

Typical resolution time: Same day.

COST CENTER NOT FOUND

Cause: The cost center code entered in Fieldglass does not exist in Workday's chart of accounts. This happens when new cost centers are created in Workday but the Fieldglass reference data has not been refreshed, or when the requestor typed the wrong cost center code.

Resolution: Verify the correct cost center code from the Finance team. Update Fieldglass with the valid code. If the cost center is new and not yet in Fieldglass, raise a request to the integration team to trigger a reference data sync.

Typical resolution time: 1 business day.

DUPLICATE WORKER RECORD

Cause: The worker already has an active record in Workday under a different ID or previous engagement. The integration blocks duplicate creation to prevent data conflicts.

Resolution: Search Workday for the worker using first name, last name, and date of birth. If a record exists, link the Fieldglass engagement to the existing Workday ID rather than creating a new record. Escalate to the integration team if linking is required.

Typical resolution time: 1–2 business days.

POSITION NOT FOUND IN WORKDAY

Cause: The position or job requisition referenced in Fieldglass has been closed, filled, or does not exist in Workday. This can also happen when the position ID was entered manually and contains a typo.

Resolution: Confirm with the hiring manager whether the position is still open in Workday. If the position is closed, a new requisition must be raised. If it is a typo, correct the position ID in Fieldglass.

Typical resolution time: Same day for typo corrections, 2–3 days for new requisition.

LOCATION NOT FOUND / LOCATION MISMATCH

Cause: The work location entered in Fieldglass does not match any active location in Workday. This happens when a new office location is added in Workday but the Fieldglass location reference data has not been synced, or when the requestor selects a location that has been renamed or decommissioned.

Resolution: Ask the requestor to verify the correct work location from the approved Workday location list. If the location exists in Workday but not in Fieldglass, raise a request to the integration team to refresh the Fieldglass location reference data.

Typical resolution time: Same day for wrong selection, 1 business day for reference data refresh.

WORKER PROFILE TERMINATED

Cause: The contingent worker's profile in Workday has been marked as terminated — either correctly (previous engagement ended) or incorrectly (accidental termination). The integration blocks the transaction to prevent reactivation without proper approval.

Resolution: Confirm with HR whether the termination was intentional. If accidental — escalate immediately to HR and the Workday admin team to reverse before re-triggering. If the worker is genuinely returning, HR must follow the formal rehire process in Workday before Fieldglass can sync.

Typical resolution time: Same day for accidental termination, 2–3 business days for formal rehire.
