

Workday User Guide — Contingent Workforce Management

RPR Financial Solutions | Procurement & Contingent Workforce Team

OVERVIEW

Workday is RPR Financial Solutions's core Human Capital Management (HCM) system. It serves as the single source of truth for all worker data — permanent employees and contingent workers alike. This guide covers the key Workday tasks relevant to hiring managers and procurement staff managing contingent worker engagements.

LOGGING IN TO WORKDAY

Step 1: Navigate to the RPR Financial Solutions Workday portal via your internal intranet or direct URL provided by IT.

Step 2: Sign in using your RPR Financial Solutions Single Sign-On (SSO) credentials.

Step 3: If prompted for Multi-Factor Authentication (MFA), approve the request on your registered device.

Step 4: You will land on the Workday Home dashboard. Use the search bar at the top or the worklets (icons) to navigate.

Note: If you cannot log in, contact the IT Helpdesk via ServiceNow. Do not share your credentials with contingent workers.

VIEWING CONTINGENT WORKER PROFILES

Step 1: From the Workday Home screen, click the Search bar and type the worker's name or Workday Employee ID.

Step 2: Select the worker from the search results. Ensure you are viewing a Contingent Worker profile, not a permanent employee profile.

Step 3: The worker profile displays: personal details, contract dates, work location, cost center, reporting manager, and system access status.

Step 4: To view contract history, navigate to the 'Job' tab within the worker profile.

Note: Hiring managers can only view workers within their cost center. Cross-cost-center access requires HR approval.

VERIFYING WORKER PROVISIONING STATUS

After a new contingent worker engagement is submitted in Fieldglass, the Fieldglass-Workday integration provisions the worker automatically within the next sync cycle (every 2 hours). To verify provisioning:

Step 1: Search for the worker by name or Supplier Worker ID in Workday.

Step 2: Confirm the worker's status shows as 'Active' under Contingent Worker Status.

Step 3: Verify the Contract Start Date, Contract End Date, Cost Center, and Manager fields match what was submitted in Fieldglass.

Step 4: If the worker is not found or shows an incorrect status, refer to the Error Runbook and raise a ServiceNow ticket if needed.

CHECKING AND UPDATING MANAGER ASSIGNMENTS

The hiring manager linked to a contingent worker in Workday must be active and have a matching email to the one registered in Fieldglass. To verify:

Step 1: Open the worker profile in Workday and click the 'Job' tab.

Step 2: Under 'Management Chain', confirm the correct manager is listed.

Step 3: If the manager is incorrect or inactive, do not edit Workday directly. Update the manager in the Fieldglass requisition and allow the integration to re-sync.

Note: Manager changes in Workday can only be made by HR. Hiring managers cannot self-serve this action.

VIEWING COST CENTER INFORMATION

Cost centers in Workday represent the financial unit that a worker's costs are charged to. To look up a valid cost center:

Step 1: In the Workday search bar, type 'Cost Center' and select the 'Cost Centers' report.

Step 2: Search by cost center name or code to confirm it is active.

Step 3: Use the exact Cost Center ID (as shown in Workday) when entering the code in Fieldglass to avoid a 'Cost Center Not Found' error.

MONITORING CONTRACT END DATES

Hiring managers are responsible for monitoring their contingent workers' contract end dates and initiating extensions in Fieldglass at least 10 business days before expiry. To view upcoming expirations in Workday:

Step 1: From the Workday Home screen, navigate to the 'Team' worklet or run the 'My Contingent Workers' report.

Step 2: Filter by Contract End Date to identify workers whose contracts expire within the next 30 days.

Step 3: For any worker requiring an extension, raise an extension in Fieldglass immediately — do not wait until the last day.

Note: Expired contracts that remain active in Fieldglass without an extension are a compliance violation.

WORKER TERMINATION IN WORKDAY

Workday terminations for contingent workers are triggered automatically when the Fieldglass engagement is closed. Hiring managers must not manually terminate workers in Workday.

Step 1: Close the engagement in Fieldglass on or before the worker's last day.

Step 2: The integration will update the worker's Workday status to 'Terminated' within the next sync cycle.

Step 3: IT access is automatically revoked within 24 hours of the Workday termination being processed.

Note: If a termination was processed in Workday accidentally, escalate to HR immediately. Accidental terminations cannot be reversed through the integration — HR must manually reactivate the profile.

RUNNING REPORTS IN WORKDAY

Workday provides standard reports useful for managing your contingent workforce:

My Contingent Workers — Lists all active contingent workers under your management with contract dates and cost center.

Contingent Worker Headcount — Summary count of contingent workers by department or cost center.

Expiring Contracts Report — Workers whose contracts expire within a configurable number of days.

Worker History Report — Full engagement history for a specific worker including past contracts and statuses.

Note: Custom report requests should be submitted to the Workday HR team via ServiceNow.

GETTING HELP

For Workday access issues: Raise a ServiceNow ticket under 'IT Access – Workday'.

For worker data issues (missing profiles, incorrect data, termination errors): Raise a ServiceNow ticket under 'Workday HR – Contingent Worker'.

For report access or custom report requests: Email workday.support@rprfinancial.com.

SLA: Standard tickets resolved within 1–2 business days. Critical (worker blocked from starting) resolved same day.
